Lumenera Signs Agreement for Commercial Cannabis Greenhouse Inspection Pilot Project

Ottawa, Ontario – June 26, 2018 – Lumenera Corporation, a leading manufacturer and developer of high performance digital cameras and custom imaging solutions, today announces that a North American commercial horticulture monitoring system provider has signed an agreement for the Lumenera LtX45R series cameras to be used in their pilot project for the inspection of greenhouse cannabis.

“The Lumenera LtX45R series cameras provides versatile performance and are ideally suited for this type of vision inspection application, said Huw Leahy, President of Lumenera. “Lumenera is an innovative leader in imaging technology and this allows us to have impact in even the most recent emerging industries like commercial cannabis production.”

These cameras will be used to gather high resolution plant images that will be combined with other environment data collected from within a commercial greenhouse. This will provide growers with a very detailed understanding of the progress of their crops, allowing proactive crop management and leading to higher yields.

The Lumenera LtX45R series cameras are based on the Sony® Pregius™ global shutter CMOS sensors and are available in 3, 5, 9, and 12 megapixel resolutions. They provide CCD-like performance from a CMOS sensor with increased frame rates and crisp, clear distortion-free images.

About Lumenera: Lumenera Corporation, a division of Roper Technologies Inc., is headquartered in Ottawa, Canada, and is a leading developer and manufacturer of high performance digital cameras and custom imaging solutions. Lumenera imaging solutions provide a unique combination of speed, resolution, and sensitivity to meet the most demanding digital imaging requirements, and are used worldwide in a wide range of industrial and scientific applications.
